

 white water river

The enthusiasm is always immense! Feeling as if you were on a wild trip in a mountain stream, you shoot from one whirlpool to the next. High gorges and steep curves, all this in rapid water with constantly changing depths.

An average incline of 4% makes considerably reduced starting heights possible, compared with conventional slide systems.

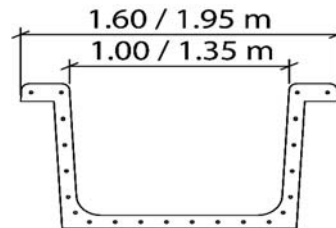

800 litres of water per second flow through the steep curves, straights and round basins, in water depths of 0.20 to 1.00 metres. The element's width varies between 1.00 and 1.35m, the incline between 0.5% and 7%, causing the flow speed to change constantly.

The river, with a recommended length of 90m, is completely manufactured from glass fibre reinforced plastic. The still pools, with a diameter of 5.90m, are equipped with seating banks and can be changed into a whirlpool by installing bubbling loungers and underwater spotlights.

## Technical information

Dimensions:	Width 100 to 135 cm
Capacity:	1'800 people/hour
Water volume:	2'800 m <sup>3</sup> /h
Gradient:	0.5 to 7%
Suitable from:	Age 10

The white-water river can be equipped with the following run-out systems:

in a pool: -plump runout
